

DAWN OF THE  
ULTRABIKE

**A**urora Motorcycles release the World's fastest and most powerful production motorcycle, which is set to redefine motorcycling. The concept is simple, build the World's most exotic motorcycle. After a seven year long gestation period in total secrecy, the end result is the **Aurora Hellfire OZ26**, a no-expense-spared Ultrabike that bristles with innovation. A frameless design, with multi link rear suspension, a Hossack carbon front end and utilizing only the finest components.

This awesome creation has a longitudinally positioned, naturally aspirated, fuel injected, 4 valve, DOHC 2,575cc V8 engine delivering over 400hp and 220 ftlb torque, yet with its brilliant electronic package, this massive but compact engine provides silky smooth delivery of power.

Innovation abounds, with a contra-rotating gearbox cancelling out any torque reaction from the engine. The multilink rear end nulls out drive shaft reactions and provides a variable level of anti squat.

The sensual carbon Hossack front end not only offers fantastic road feel, but delivers low unsprung weight and proportional antidive, with both front and rear ends controlled by Ohlins TTX electronic shocks. The front end, in conjunction with the Brembo GPX R4 calipers, delivers exceptional braking capability far beyond what the best conventional forks can provide.

Fantastic styling by renowned designer Tim Cameron gives the bike an aggressive but visually pleasing stance that looks fast just standing still! From the "Predator" front fairing to the dual plane rear end, this striking visual design also manages to blend-in the classic 60's F1 look with its exposed carbon intake stacks, all eight of them!

The bike's software features sport/touring/city/wet/custom modes with 10 level traction control, configurable damping, anti-wheelie and ABS. Gear shifting the 5 speed gearbox is by foot or by handlebar button up/down one gear, or given the bike's huge torque, you can shift two gears at a time!

Power, styling, software, innovation are all harmonized in the **Aurora Hellfire OZ26**. Be prepared to redefine your limits! The World of motorcycling has a new King.

The Ultrabike is born.

## HELLFIRE OZ26

# SPECIFICATION

### ENGINE

TYPE 80° V8 4 Valve DOHC  
DISPLACEMENT 2575cc

### PERFORMANCE

MAX. POWER 311Kw (417hp) @ 9,500 rpm  
MAX. TORQUE 319Nm (235ft/lb)  
TOP SPEED 340+km/h (210+ mph)

### DIMENSIONS

WHEELBASE 1600mm (63")  
DRY WEIGHT 270Kg (594lbs)

### FRONT END

TYPE Hossack  
CONSTRUCTION Billet Wishbones, Carbon bridge

### REAR END

TYPE Multi Link  
DRIVE Shaft, dual uni with cush  
FUEL TANK Kevlar construction 22 L capacity
